Ms Marlene Dortch, Secretary
Federal Communications Commission
445 12th Street, SW
Washington DC 20554

RE: IB Docket No. 11-109, SAT-MOD-20101118-00239

Dear Ms Dortch:

The Federal Communications (FCC) just ended one chapter in LightSquared's decade old effort to build a next generation wireless broadband network. With that decision, it is imperative that the FCC exert its leadership to find an alternative path to deliver the benefits of LightSquared's network to the American people.

This Virginia based company invested several billion dollars based on the FCC's mandate to build a nationwide network to reach 260 million Americans by 2015. If the FCC fails to follow through on this mandate, it will undermine one of the most significant investments in U.S. wireless infrastructure.

President Obama has made broadband expansion an Administration priority, yet the FCC has thrown up roadblocks on LightSquared's market solution proposal that involves no use of taxpayer funds.

If LightSquared is denied the chance to build its network, then the American people will end up paying more for wireless and there will be less competition, choice and innovation will be stalled. And the 26 million of Americans that are stuck without broadband will still be in the same situation.

Instead of the FCC blindly following the recommendation of the NTIA when they said "cease", the FCC should be seriously considering the practical and affordable solutions that already exist to address the remaining GPS interference issues. These solutions show that Americans can have both SPS and LightSquared services without interference.

Sincerely,

Joseph Thomas Jordan
